

Personal Alert Safety System PASS

The components of the PASS include the air pressure gauge, manual alarm activation button, manual reset button, and the indicator/warning light.

- The manual alarm activation button is the red button on the face of the pass device. Practice activating the button with gloved hands.
- The manual reset button is located on the side and below the activation button. Clicking the button twice in rapid sequence will stop the pass alarm once activated.
- The indicator/warning light will flash red in alarm
- When performing daily checks, depress the manual reset button once, the indicator/warning light will flash green to indicate the batteries for the PASS are at an acceptable limit.

High Pressure Supply Line

The high pressure hose connects the bottle to the pressure reducer. Note the O ring on the high pressure coupling.
